

TERRING Life Cycle BCE Place 161 Toronto

Architectural Roof Tops

Any city with large office tower buildings will have many roof tops, some of these are just architectural roofs, that other than window washers no one will ever walk on. To make them aesthetically pleasing many of the roofs will be tiled in concrete pavers, granite or porcelain. Whatever material is selected they will have to be supported and the gaps between them even. Pictured below is a recent project where over 20 years ago WEGU TERRING 200 product had been laid under concrete pavers now the roofing membrane had to be replaced. Many of the TERRING 200 that were laid over 20 years ago were able to be reused. So the extra cost of using a rubber paver actually paid for itself, they lasted longer than the roofing membrane itself.

Contractor Dean Chandler Roofing.
Distributor Spar-Marathon Roofing.
